# Bulbs From Holland

OR SEVERAL YEARS it has been our custom to mail the new Bulb Catalog early in May. It is done to enable our customers to take notes and make their selections for the coming season while the Tulips and spring bulbs are still in flower. There would be no object in this early mailing if we offered only the ordinary standard varieties. But many of the newer kinds offered by us exclusively must be ordered AT ONCE to be sure of getting full delivery. The fact is that The Wayside Gardens Company are the largest importers of fine and unusual bulbs in this country. No other firm offers as wide a choice of really fine bulbs as we do. You will ask why? Simply because of many of the new things offered by us, no more bulbs are available than the quantity we require for our customers, which is all there is grown.

## Before August First

Notwithstanding our cautioning and urging, many people desiring the better things sent their orders so late last year, we were not able to import in time for their needs. Consequently, were not able to fill their orders in full. May we, therefore, press this point once more. Send your order for the rare things BEFORE AUGUST FIRST if you possibly can do so.

## THAT MATTER of QUALITY

The enviable reputation we enjoy is known to most gardeners. It is constantly strived for by giving faithful service and sending faultless quality.

Quality perhaps is the most important of the two and happily we can do more than most in that respect, because the secretary of our company is a member of the firm of Grullemans in Holland, internationally known as the finest growers of bulbs, whose early business years were spent with that firm, obtaining an intimate knowledge about bulbs, an opportunity which does not present itself to the average American importer who consequently is not as well informed.

### GUARANTEE

We guarantee every bulb we send out to be in first class condition in every respect, of top size, and true to name. We further guarantee that all will bloom for you if you will give them reasonable care and carry out our cultural instructions which are enclosed with every order. Your money will be refunded or new bulbs sent if they do not come up to our claims or your expectations.

We guarantee safe arrival to all points within the United States, and upon your notice will replace immediately any damaged bulbs at our expense.

A like guarantee is, we believe, not made by any other firm in America. It is only possible because the bulbs we sell are the choicest obtainable imported from the best and most critical grower in the world.

Buy your bulbs from WAYSIDE GARDENS and see the difference!

# The Most Beautiful Julips Available Today

### A Collection of 12 Varieties

### THE TWELVE

GOOD FRIEND of Wayside Gardens, a most particular gardener, instructed us, two years ago, to import for him twelve bulbs each of the twelve finest and most beautiful Tulips available. He has a small garden but it is planted with only the choicest and newest things. It, therefore, was up to us. Apparently we made good; he came and reported that never before a collection as choice flowered in any American garden, and urged we offer these same varieties to other enthusiasts and people who can use only small quantities, but insist on the best.

The world moves, varieties come and go, but it will be a very, very long time before this selection can be improved upon. To possess and grow these is to possess the jewels among Tulips. As you know, we are not given to superlatives, but frankly, we enthuse over these varieties.

# Ideal Darwin Collection

## Ten Lovely Varieties which Received the Greatest Number of Votes

IN our test garden are planted each year several hundred varieties of new Tulips. In one particular location in this garden we showed for three consecutive years a group of Ideal Darwin Tulips. We asked the hundreds of visitors to these yearly exhibits to select 15 varieties they liked best in this group. From their selection we have taken the 10 best varieties for this collection.

It is a beautiful collection of well matched colors. The two red varieties are subdued, the red blending splendidly with the white, pale yellow and lavender tones.

# The New Ideal Darwin Tulips The Word of Two Nationally Known Authorities

Richard Wright (House & Garden) writes:

For several years now the "Ideal Darwin" Tulips have made a most gallant and brilliant display in my garden. They possess sturdy substance that leaves nathing to be desired. Their calor range is sa generous that both in massed plantings and in shaals through the herbaceaus border all manner af subtle and striking combinations can be made. They are a garden investment that pays high premiums of beauty.

Leonard Borron (Flower Grawer) writes:

Further study of and experiment with the Ideal Darwin Tulips merely adds weight to the conviction already expressed; that they do farm a really ideal group in that splendid family of bulbs. Their bright calars, their cheerful bearing and, yes, their real gayety in the garden, make them delightfully welcame.

The Ideal Darwins have, indeed, made my garden much

more jayaus in Tulip time.

the blooms ore of good size, ore grocefully spaced ond os you con well imogine, produce on unusual effect and o great mass of color. The soil must be kept rich because if planted in poor ground they will not be os floriferous.

very unusual in their coloring.

## Bizarre and Bybloem Julips

(Old Dutch Tullps)

Bybloem and Bizarre Tulips are "rectified" Breeder types. The Tulips are of an old race which has been grown in Holland and in France since the beginning of the seventeenth century, and which caused the famous Tulip craze in 1635. The Bybloems are queerly striped and feathered rose or violet on a white ground. The Bizarres have dark brown stripes and feathering on a yellow ground. They flower about the same time as the Breeder and Darwin Tulips but do not grow quite so tall, and are seen at best advantage when planted in clumps in the herbaceous border or among evergreens and shrubs. They are above all sensational show Tulips. All form rare artistic beauty.

They bloom at the same time os the Darwins and require the same care. We advise their use in a mixture only.

\*Finest Mixed Rembrandt Tullps \$0.85 per 12; \$6.50 per 100

## Chinese Lantern Julips

Especially well suited for southern gardens.

Especially well suited for southern gardens, Imagine a handful of Tulips having the delicate pure pastel shades of our finest Sweet Peas and you have but a fair description of their colors. The general effect, however, is that of lighted, delicately colored Chinese Lanterns. The perfectly formed globular blossoms glow with an iridescent light not heretofore seen in Tulips. The colors are too exquisite to accurately describe. They have been admired by visiting growers from all over Europe. The introduction of these lovely hybrids has been given to Wayside Gardens. The colors are all in those elusive tints of solmon, orange, and salmon-pink of the most delicate pastel shades yet brilliant and vibrant with life. They are late flowering, blooming after most of the Darwins are out of bloom.

When Chameleon Tulips first come into bloom they show only faint tracings or delicate margins of pink on the edges of the flower petals, with the development and consequent aging of the bloom these markings enlarge and gradually spread over the entire flower. ## Lily=Flowering Julips

The Tulips offered under this heading have been kept by themselves because of their distinct Lily-like flowers. They really belong with the Cottage Tulips but would be lost or difficult to find if offered in that already quite large group. Lily-Flowered Tulips bloom the same time as the Cottage Tulips and are best used where a light, airy and graceful effect is desired. The delicately curved petals give a delightful effect. # Hyacinths for Indoor Growing or Exhibition

No one would have expected that our old Mother Earth contained such entrancing fragrance had not Hyacinths, by some miracle of alchemy, revealed it to us

Here, too, we have it combined with the widest possible range of color.

They open to greet us before the new spring dawns, if we but give them a share of our garden, and pour out their incense as if in token of their gratitude and thanks for their deliverance from a long imprisonment.

# New Multiflora Hyacinths

By a special cultural treatment in Holland, Hyacinth bulbs can be grown which will produce from 6 to 10 excellent flowers on one bulb. We have secured about 7000 bulbs of these Hyacinths. A thousand more or less of each color. If you like to grow bulbs in the house, here is an opportunity you must not overlook. They are easily grown in Wayside Gardens Bulb Fiber or earth. Each bulb will come carefully packed in a small box. Cultural instructions will go with each order. Don't pass up the opportunity of having several clusters of fragrant, colorful flowers this winter. They may, of course, also be grown in the garden.

# French Roman Hyacinths

The early Roman Hyacinth, with its graceful spike af fragrant bells, is one of the earliest of all winter-flawering bulbs.

New-crop bulbs will be ready in September, when they may be planted in pots or pans of a compost containing two-thirds fibrous loam and one-third sand. They may also be placed in the more artistic ornamental bowls now available in any china store, using our prepared Bulb Fiber as a filler, which only needs to be kept continually moist, requires no additional fertilizer, and in which the bulbs thrive and bloom luxuriantly. Bulbs planted in September bloom in December.

# Hyacinths for Garden Planting

Truly a precious source of scent and color, at a time when other flowers are still too shy or fearful to venture forth. No other plant in early spring displays such an abundance of jubilant tones of red, rose, lavender, purple, blue, yellow and orange. No other spring plant enriches our parks and gardens with a heart-lifting fragrance so soon after the snow is gone. No other plant requires so little coaxing to give its all, either in the garden or in the house. As house plants, in bowls with bulb fiber or on glasses filled with pure water or in good old-fashioned clay pots and pans with garden soil, its "rising spire," colorful and fragrant, effects a rare and perfect quality of delight.

The most satisfactory Hyacinth flowers for the garden are produced from the bulbs about 15 to 17 centimeters in circumference. These sizes are the most suitable for outdoor planting in formal beds or in drifts in the border. The larger, say 17 to 18 centimeters, are ideal for bowls with fiber, or clay pots and pans with soil. They are economical grades, selling at 30 to 40 per cent less than the "top sizes." Top sizes should be used for water glasses, and for contests at shows or by those who desire the finest and largest bloom. They are offered on the opposite page.

### Special Named Varieties in Distinct Shades of Color to Flower at the Same Time

The Hyacinth chosen ta represent each of the following shades of colar is a variety which we hove found from triols will be best in the three essential requirements: Best in its color; stautest stem; largest truss of bells; we desire aur patrons to knaw that we have avaided using varieties that ore of weak stem, and that do not support the blaams under normal gorden conditions.

## Bedding Hyacinths

Second Size or Bedding Hyacinths—bulbs measure about 15 to 16 centimeters in circumference.

RED AND PINK

General de Wet. Light pink. La Victalre, Carmine-red. Lady Derby. Deep rose-pink. Queen of the Pinks. Rose-pink.

WHITE

La Grandesse. Pure white.

L'Innocence. Pure white.

Grand Moitre. Lavender-blue. Queen of the Blues. Porcelain-blue. King of the Blues. Dark blue. Duke af Westminster. Purplish blue.

YELLOW City of Haarlem. Pure yellow. All Colors Mixed.

Any of above Hyacinths: \$1.20 per doz.; \$8.00 per 100; \$75.00 per 1000.

Culture: These Hyacinths should be planted from 6 to 10 inches apart, and covered with at least 4 inches of soil from the top of the bulb. For beds or borders close to the conservatory or dwelling, 6 inches will make a fine display; but where the beds are planted to be viewed from a distance, they may be planted 10 inches apart. Hyacinths planted alternately with Darwin Tulips produce a color effect in the same bed lasting better than a month, and for this combination 6 inches from bulb to bulb is also a very suitable distance. It is advisable to cover, after the bulbs have been planted, with leaves or some heavy material that will prevent them from freezing or being affected by early spring frosts after they have started. Hyacinths, as well as Tulips, should be planted by November first in this latitude, as they are the better for early planting.

## Miniature Hyacinths

Third Size ar Dutch Romans—bulbs measure about 13 to 14 centimeters in circumference.

RED AND PINK

General de Wet. Light pink. La Victoire. Carmine-red. Lady Derby. Deep rose-pink. Queen of the Pinks. Rose-pink.

WHITE

La Grandesse. Pure white.

L'Innocence. Pure white.

Grond Maitre. Lavender-blue. Queen of the Blues. Porcelainblue.

King of the Blues. Dark blue. Duke of Westminster. Purplish blue.

YELLOW City of Haarlem. Yellow.

All Colors Mixed.

Any of the above Hyacinths: \$0.85 per daz.; \$6.50 per 100; \$60.00 per 1000.

Miniature Hyacinths should be plonted 5 to 6 inches apart and covered with at least 4 inches of soil on the top of the bulb. They are particularly well adapted for planting in informal groups in the borders and are highly successful in beds. An attractive way to plant them is to combine them with Darwin Tulips or Cottage Tulips, setting the bulbs alternately. A flower bed so handled will be a splash of color for over a month. First the Hyacinths come into bloom. When the flowers fade, they may be removed, to be replaced by the Tulips which carry on the display of color well towards the end of May.

To prevent damage from frost, we advise a liberal covering with straw or any other garden litter after the ground has become frozen.

## Colchicum - Meadow Saffron

(Giant Autumn-Flowering Crocus)

Colchicum are autumn-flowering bulbs with large Crocus-like blossoms which appear during the months of September and October, without foliage. The foliage, however, appears early in the spring about the same time the Tulips and Hyacinths are in bloom and disappears in June. They are especially recommended for planting between the taller growing rock plants such as Cerastium, Vinca, Pachysandra and the various Sedums, where their bold, checkered Crocus-like blossoms are seen to the best

advantage. Blooming in September and October when flowers in the rockery are scarce, they are especially valuable. They may be also planted in the open woods or in naturalistic plantings of any sort. The bulbs, if kept indoors, will bloom during September and October in the window without any earth or water and after blooming, the bulbs may be planted in early November outdoors, and will not suffer in the least.

# Autumn and Spring Flowering Crocus Species

Besides the Dutch Crocuses there are certain species that bloom very much earlier in the year, often before the snow has gone. The flowers of these wild sorts are smaller than those of the Dutch kinds but they are as vigorous and free as the others. Given a sunny position in the rock garden or a sheltered position in grass where the sun may encourage them freely, they will surprise you by their hardy appearance in the face of cold and storms.

Crocus Imperati, pale lilac with buff jackets, often

flowers in late February, and is closely followed by Crocus Sieberi, a fuller, purer mauve sort; it has as a companion the deep rich yellow Crocus Susianus, which is even more attractive in the bud stage with its dark, rich brown flowers on the exterior of the segments. Once planted, they will take care of themselves for many years. Then comes Crocus Tommasinianus, an exquisite vaselike form, in color varying from a pale mauve to quite a rich purple. This variation is one of its great attractions. These all increase as freely as do the Dutch varieties.

# arcissi = Daffodils

The past few years have seen tremendous progress in the development of the Daffodil. Magnificent new varieties are now available and if you are a lover of Daffodils may we suggest you plant a few bulbs of such kinds as Beersheba, Lovenest, Mrs. R. O. Backhouse, John Evelyn or Moonshine. Many of our friends are growing some, selling the yearly increase to acquaintances, making a handsome profit on their investment as well as having a pleasant and profitable hobby. All varieties offered are recommended by the American Daffodil Society.

# Daffodils for Naturalizing

The greatest and most effective use of Daffodils is to naturalize them in quantity in meadows and orchards, in woodlands and along the driveway, on the bank of the brook or along the shrubbery.

By planting some bulbs on the south side and some others facing north, a long period of flowering, lasting well over a month, may be enjoyed.

Daffodils are the most prolific of flowers. If you plant a single bulb it will not be long in gathering a family, and in the course of two or three years the spot in which it grows will have become as populous as the tents of the patriarchs.

Planting mixed Daffodils is an investment that pays large dividends, if the right varieties are used.

The mixture presented by us is made up from named varieties and should, therefore, not be confused with other mixtures offered. This mixture is not grown as such, but varieties are selected that are especially adapted for naturalizing and will give an abundant and prolonged flowering period, increasing from year to year.

In addition to a peculiar attraction at first sight, this flower leaves one with an impression that it is white, yet it is a whiteness that is not white. The recurving petals and the angle of the three trumpets are unlike the conventional short-cupped Daffodil. The stem is dark green, round and reed-like thin. This beautiful cluster-flowered Daffodil is especially lovely in full sunlight, as it has a transparent character, but the flowers viewed in shade do not look poor or papery. The perianth, which is a sulphur-yellow, seems rather to be of the quality of the soft taffeta silk which, in the old days, was known as "sarsenet," and the petals are slightly ridged lengthwise. The corona is of rich orange-scarlet and there are usually about 6 flowers to a stalk.

Cheerfulness \$1.75 per 12; \$11.25 per 100

Madanna Lily)

The Madonna Lily is one of the loveliest of white Lilies, popular throughout the world, loved and admired by all. Its delightful fragrance and lovely white flowers have made it a universal symbol of purity. Plant it in groups of three or more bulbs, close to the pale blue Delphinium Belladonna. It will be the loveliest spot in your garden

during late June and early July. Madonna Lilies are simple to grow if you will plant in full sun and perfectly drained soil. Most Madonna Lilies are grown in France. Bulbs from the north of France are better than those grown in Southern France. We offer, therefore, Northern France grown bulbs as follows:

It is beautiful for every kind of garden use but because of its tender coloring, must be planted in a mixed border with brighter flowers. In combination with light-shaded Delphiniums or with the Madonna Lily, which it resembles, it is most effective. It has the texture of Lilium Candidum, with reflexed petals and does well under the same conditions as Candidum. Four to five feet high, June-July flowering. (Color illustration, page P).

They commence blooming in early August and flower until stopped by frost. Bulbs when established will produce 3 to 4 spikes each with 4 or 5 blooms. # Lilies for the Garden

Lilies, unlike Tulip bulbs, are not all grown in one locality under one and the same conditions, but are gathered together from many foreign countries. All ripen off at different times of the year; therefore, orders for Lilies cannot always be filled at one time. The requirements of Lilies vary with each variety. We have a booklet on their culture, which will be sent to you

upon receipt of 25 cents.

Because of the lock of knowledge and the carelessness of many planters, we do not guarantee Lilies to grow. We do, however, guarantee to supply you bulbs in good candition and will replace without charge, any damaged bulbs, immediately upon hearing from you.

### Calochortus

Until one has seen a good collection of these plants, he has no idea how much Nature can do in the variation of one flower. All Mariposas are forms of Calochortus, yet there are several strains, all with the slender grace of stem belonging to the species. Cup-shaped flowers, one to many on a stem, wonderfully marked with eyes and dots and pencilings in rich colors, are characteristics. Yet each strain carries out the plan on a color scheme of its own, and then can be compared only with the orchids in wonderful variability of beauty. "Mariposa" is simply the Spanish word for butterfly, and is applied to these Tulips because the eyes and markings of the flowers are so much like those on a butterfly's wings. The bulbs are small and should be planted about 2½ inches deep and covered during winter. (Color illustration, page R).

There is no better investment for the flower lover than a quantity of these bulbs. They thrive best in a rather porous soil, either sandy or gritty, and will grow either in sun or light shade. Flowers are 2 to 4 inches in diameter. Mixed colors.

Chionodoxa - Glory-of-the-Snow

A mass planting forms one of the most sumptuous displays of floral beauty, a mass of blue and white, intense and brilliant. They bloom at the time of the Crocuses, producing dwarf flower spikes, bearing from 12 to 15 flowers of a sky-blue with a pure white heart, creating a lovely effect. They should be planted in the fall, 3 inches deep, about 18 bulbs to a square foot, in a sunny location or in half shade and in places where they can remain undisturbed for a number of years. The flowers will cross with one another and will seed themselves, forming natural colonies. All are 6 to 7 inches high, therefore excellent in the rockery as well.

## Gremurus

A noble family of hardy plants, most delightful and desirable for stately and colorful groups in large plant borders and shrubberies. They are perfectly hardy, and when well established, produce dozens of giant flower spikes, like huge Hyacinths, attaining a height of from 6 to 10 feet, the flower spike (comprising several hundred flowers) being from 2 to 3 feet long. They thrive in any sunny, well drained border. They should be planted in early fall only. These wonderful, gigantic flowering plants do not require a great depth of soil, as the fleshy roots spread outwards. The plant disappears above ground after flowering and annuals may be planted close to them to fill the vacant space. A light mulching is advised as a winter protection.

The following list includes some of the finest and rarest in commerce, all flowering in July. No. 1 and No. 2 size roots not guaranteed to bloom first year.

## Gremurus 3-Year-Old Seedlings.

During the past few years there have been many requests for Eremurus seed and young plants. The seed of Eremurus is difficult to germinate; we, therefore, never offered it because it was bound to lead to disappointment. Seedling roots, one or two years old, are too small for the average person to care for, but we are now able to offer some fine roots which are three years old. We know these will grow without trouble and surely bloom within two years. These young roots are unnamed but are the same varieties as offered above. It will be well worth your while to plant a few of these healthy young roots for growing on.

### Freesias

Without doubt the most sweetly scented flower grown; a single bloom permeates the living-room with its delicate perfume. Although they are quite popular and very easily raised, we suggest the following treatment: Procure the bulbs as early as possible and plant them in August, 6 to 25 bulbs for a single pan. The soil should be a mixture of good loam. The bulbs planted early, say August and September, must be placed outdoors until cold weather sets in; must be regularly watered and kept growing all the time. In November, before frosts appear, the pots should be placed in the window of a cool room.

## Galanthus - Snowdrops

Snowdrops belong to the most beloved early flowering spring bulbs. They require very little attention, and can remain undisturbed for years and years. They like rather moist and cool soil. To get a lovely effect they must be planted thickly, while they can be grown under trees and shrubs, in woodlands and in lawns. In the latter case, the lawn should not be mown before the leaves ore withered, or next year's blooms may be spoiled.

Improved Spanish Iris-Far Garden Planting

Improved Spanish Iris—Far Garden Planting
This very distinctive group is of recent origin and has in a few years won international recognition. The flowers are not only superior in substance, brilliancy and purity of color but also earlier, larger and of greater refinement than the old Spanish Iris. The new hybrids we offer are readily distinguished by the narrow orange stripe on the falls, while the older varieties have a larger yellow blotch. These Iris are unsurpassed as cut flowers, since they will stand any amount of handling, lasting fully a week in water. Their hardliness and interesting color range have made them very popular for garden planting. In extreme climates they need some protection. The varieties we list have been carefully selected to give the full range of colors.

# Hardy Border and Rock Plants

Gardeners and lovers of flowers know about the importance of Hardy Perennial plants in the garden. Beginners, we would like to tell that these plants are long lived and with modest care and attention grow larger and finer from year to year. They exist in infinite variety, ranging from the tiniest edging or rock plant to tall, stately, robust plants for backgrounds in larger gardens. Careful selection of plants will enable you to enjoy hardy flowers from earliest spring until snow. Masses of bloom may be had long before the annuals show color.

The most successful and colorful hardy gardens are those which ore planted early in the fall or early in spring and where three or

more plants of one kind have been planted in a good sized single group. In the larger gardens it is best to use six or even a dozen plants of one variety. Create solid bold masses. Gardens so planted are easy to take care of and unquestionably the most satisfactory. satisfactory.

# Hardy Phlox

Two Grown by Wayside Gardens Only

## Phlox COLUMBIA

-the finest light pink phlox ever introduced

(Plant Patent No. 118)

The color suggests a delicate cameo-pink with faint blue shading at center. The effect created by a well grown plant is exquisite and never before seen in Phlox.

The clearness of tone is remarkable, the brilliancy is so pronounced that immediate attention is given to this wonderful plant. As the flower ages, the blooms always retain their delicate pink shade; there never are any magenta tones visible.

Out of each leaf joint grows a lateral or secondary flower spike continuing the display of blooms long after the main flower head has disappeared. Columbia is therefore well called the "perpetual flowering" Phlox.

Of great importance is the habit of Phlox Columbia, its strength and vigor is something rarely seen in plants. A well grown, two-year plant will produce from 5 to 15 flower spikes.

## Phlox AUGUSTA

—the finest cherry-red phlox ever introduced

(Plant Patent No. 252)

A strong growing plant of medium height, about 21/2 feet when fully grown, with rich bronzy green foliage and stem. Color is best described as a brilliant cherry-red, not quite as deep as Beacon and much more intense and sparkling. The young florets at opening show a decided amount of orange. Unlike most Phlox of this color, it does not discolor or bleach in the sun. The color remains perfect under all weather conditions. Augusta is a beautiful vivid colored variety of exceptional growth and qualities and will eventually replace all other varieties of similar shade.

In plantings, begin at outside row—where 6 inches apart, 3 inches from edge of bed; where 12 inches apart, 6 inches from edge of bed. It is customary among professionals in planting a bed to set the plants or bulbs somewhat closer together in the two

outer rows, giving more space between each plant or bulb to-ward the center of the bed. A square bed will take about the same number of plants. For an oval bed, add length and breadth and divide by two. For example, an oval 9 feet long by 7 feet wide will require the same number of plants as a circular bed 8 feet in diameter.

# A New Barberry A Much Better Hedge

#### BERBERIS MENTORENSIS

(Plont Potent No. 99)

Berberis Mentorensis is the result of a cross between Barberry Thunbergi ond Barberry Juliana. It hos very rugged, strong, upright growing branches and quite formidoble thorns. Its folioge is heovy and thick ond of perfect color —a green os dork os the Japanese Yew.

In Northern Ohio the leoves remain green until ofter the holidoys, ore dropped during the lote winter, and new folioge oppears early in April. Plants growing south of here retain their folioge much longer. In southern parts of the country, Berberis Mentorensis is evergreen.

Its most voluoble ottribute is its obility to withstond heat ond drought. Few other shrubs or hedge plonts ore oble to go without woter and withstond intense heat as Barberry Mentorensis and look os well. During the hottest weother there is never ony sign of wilting or burning, much to the omozement of everyone.

Upright growth; easy upkeep (requires reolly no pruning), and its tenocious foliage, more than compensate for the lock of berries. We heartily recommend Berberis Mentorensis to you and claim it to be the best moderately priced and perfectly hardy hedge plant to date.

#### For Shady or Sunny Places

It contradicts itself in the way it thrives so satisfactorily under directly opposite conditions. Unlike other Barberries, it flourishes both in the shade and in the sun.

When used for a hedge, that means there will be none of the usual thin spots or holes in the hedge where it is shady. Being heavily thorned, it makes a formidable barrier. Dogs and ruthless boys take no liberties with it.

#### Laughs at Dry Weather

One of the amazing things about this Barberry is the way it thrives regardless of how dry and hot the summer may be.

Truth to tell, we didn't know it so unfailingly had that invaluable trait, until letters started coming to 'us. Letters from last summer's drought-affected Kansas and other parts of the country. Parts where for months there was not a drop of rain.

#### Here's Drought Proof

Let us quote from a letter of Mortimer Burroughs, received last October. He is a garden architect at Clayton, Missouri. This is what he says:

"I have been much impressed with the new Barberry Mentorensis during the terrible drought we had in St. Louis this summer.

"We moved several when in full leaf last spring. Planted them on the north side of the house in dense woods. They received no water during the whole miserable summer, and scarcely any sunlight. In spite of this grilling handicap, they did not even droop, and actually made considerable new growth.

"As a shrub for foundation planting, either in shade or full sun, it is excellent. Its upright dense habit of growth makes it ideal for hedges, as it thrives equally well in shade as in full sun."

There are six outstanding points of superiority about this Barberry:

First—it is evergreen practically the year around. Think what that means.

Second—its sturdy, erect growth carries a thick dark green foliage right down to the ground. Is never bare-legged.

**Third**—when used for a hedge, its thorny, strong growth forms a formidable barrier to man or beast.

Fourth—needs no pruning. It is of erect growth which becomes dense when the plant is three or four years old. No upkeep! No pruning!

**Fifth**—combined in a foundation planting with evergreens, it provides a beautiful and artistic contrast at very small expense and without elaborate preparation of soil.

Sixth—is not "choosey" about where it grows. No matter if you can't make other broad-leaf evergreens, such as Azaleas and Rhododendrons, thrive in your soil, this new Barberry will. It is equally at home whether it is acid or alkaline soil.

# Rodopel

## The New Rodent Repelling Peat Moss

#### **Protects Bulb Plontings**

against ravages of rats, mice, moles and other destructive rodents. Rodopel is a new material so highly distasteful to rodent pests that they refuse to go near it in their search of food. Three years of study in laboratories and in the plantings of nationally known bulb growers have shown that damage by rodents is wholly eliminated when Rodopel is used.

#### How to Use Rodopel

It does not kill rodents but drives them away from the plantings. It is harmless to pets and birds.

Rodopel is simple to use. It is only necessary to scatter a small amount (about one heaping tablespoonful -more is harmless) around each bulb at planting time.

For small plantings done with a trowel drop a pinch of Rodopel in the bottom of the hole; set the bulb; partially cover the bulb with soil; then scatter more Rodopel around the bulb to ring it; and cover as usual.

For large plantings where the bed is dug out, scatter Rodopel lightly over the bottom of the bed; set the bulbs in place; spread a small amount of soil to partially cover the bulbs; scatter more Rodopel around the bulbs and cover as usual.

Harmless to bulbs. Harmless to other vegetation. Non-poisonous. Clean and pleasant to use.

# Hormodin

REG.U. S. PAT. OFF

#### The Root Forming Chemical

Developed by Boyce Thompson Institute for Plant Research

WHAT HORMODIN IS. "HORMODIN" is a hormone-like plant growth substance. Its principal use is to stimulate rapid root growth on cuttings. It has widespread use in propagating cuttings, whether rooted with ease, or normally rooted with difficulty. Many cuttings formerly impossible to propagate may now be rooted with the aid of Hormodin.

WHAT HORMODIN DOES. The Hormodin treatment is simple, economical, and scientific. It saves time, space and labor. Hormodin makes it possible for growers to reproduce plants from cuttings with high percentages of successful results.

HORMODIN HAS WIDE APPLICATION. Fortunately, the growth substances are not specific for certain varieties or groups of plants. This is particularly true with respect to cuttings treated with water solutions of Hormodin.

Different plants require different treatments as to the concentration of the Hormodin solution, and the number of hours of treatment required. Growers are urged to follow directions, a copy of which is enclosed in each package.

To treat cuttings with Hormodin, merely place the basal ends of the cuttings in a Hormodin solution of recommended strenth for a designated period of 4 to 48 hours. The cuttings are then removed from this solution and planted in a propagating bench, as in methods normally used. Cuttings so treated root quicker, and have more growing roots per cutting.

ADVANTAGES OF PROPAGATION FROM **CUTTINGS.** Hormodin makes it possible for growers to propagate practically all varieties of plants from cuttings. With Hormodin such plants as evergreens, deciduous shrubs, fruit, nut and forest trees, sub-tropical and tropical fruits, herbaceous perennials, roots, sprouts and annual flowering plants, can now be propagated in higher percentages. Growing plants from cuttings offers many distinct advantages. Germinating plants from seed often involves high labor costs, loss of expensive seed, and presents many hazards. Reproduction of many species from seed is a slow process. There is, at times, a wide variation in the results of types of plants that grow from seed. Many plants do not come true from seed.

To treat cuttings, the basal ends are left immersed in the solution to a depth of three-quarters of an inch to two inches for the recommended period of time. At the end of this period, the cuttings are removed from the Hormodin solution, washed off with fresh water, and are then ready to plant in the rooting medium. From here on, with but a few slight modifications caused by the rapid and abundant root growth induced by Hormodin, the care of the cuttings follows approved propagation practice. This is completely described in the Hormodin directions.

DEPENDABILITY OF PERFORMANCE. Hormodin brings dependable performance from plant cuttings at low cost. For a fraction of a cent per cutting, Hormodin increases the percentage of cuttings that root. The method of treatment is safe, certain, economical, and scientific.

Due to the rapid growth of abundant healthy roots, Hormodin-treated plants mature more quickly, and frequently flower more

profusely.

Hormodin is tested for plant growth potency by the Boyce Thompson Institute. You purchase Hormodin on the basis of units of root-inducing power. The rigid chemical control in manufacture maintained in the laboratories of Merck & Co., Inc., by a staff of chemists long experienced in the manufacture of fine products similar to Hormodin, assures you of a high standard of uniform purity. Scientifically designed containers, convenient to use, bring Hormodin to you in a pure, potent condition, ready for use.

Nurserymen, greenhousemen, and other large growers will be particularly interested in the large economy packages. Each package contains a calibrated easy-to-use measure, complete directions, and a treatment chart. Order Hormodin today.

# Wayside Gardens Bulb Fiber

(Patented)

A Charming Method of Growing Beautiful Spring Flowers For House and Table Decoration

The wanderful success which many of our correspondents have achieved in growing Roman Hyacinths, Freesias, Narcissi, Tulips, Dutch Hyacinths, Lilies-of-the-Valley, and other bulbs in Wayside Gardens Bulb Fiber in bowls without drainage, proves that this is one of the most charming and effective methods of growing bulbs. Those who have neither a large garden, nor the convenience of greenhouses, or frames, or who have a difficulty in obtaining suitable soil find most of their troubles removed in adopting this modern method of growing bulbs in the house. It will be extensively adopted in the future when it is fully realized what excellent results may be obtained in this way.

The advantage of this system is that the bowls, having no drainage holes, can be placed anywhere about the house without fear of any mess or damage to furniture. Wayside Gardens Bulb Fiber is perfectly odorless and clean to handle; it is specially prepared for the purpose of growing a great variety of bulbs in the house. Leaves no dirt or stain. It can be used for several years.

**Culture:** Moisten the fiber to saturation, fill the bowl with the soaking wet fiber mixture up to the rim and plant the bulbs in the same manner as with ordinary soil. A little fiber should be shaken down into place after planting but should not be pressed down too tightly or

the bulbs will be forced upwards when root growth com-

After planting, adopt either of the following plans:

The bowls may be placed in a cold frame, airy cellar or in a dark or moderately dark, airy, cool room. They must never be placed in a closed cupboard. It will not be necessary to give a great deal of water; perhaps once every two weeks.

In the case of bowls placed in the cold frame there will not be much need to give any water. Where, however, the bulbs are not exposed to rain, the bowls should be examined twice a month, care being taken that the fiber mixture is kept uniformly damp. For the first weeks after planting, additional water should be given sparingly, sufficient only to encourage root action. As soon as the bulbs are well rooted, water should be given more freely. If the mixture is allowed of ony time to become dry, the flawer buds may go blind. Should by any chance too much water be given, the bowls may be drained by tipping them on their sides.

When the bulbs have made a good top growth in the dark, the bowls should be placed in a sunny window where they will get the morning sun. They must have sufficient light and air to prevent the foliage from becoming drawn. Never place bowls on top of radiator cover. A temperature of 55 to 60 degrees is sufficient to obtain good blooms; the bulbs resent too warm a temperature.

Romon Hyocinths, 5 or 6 in a bowl, make a very charming table decoration, and if potted early in September may easily be had in bloom by middle of December; if a number are potted at the date mentioned, a succession of these charming flowers may be had until the middle of January, by bringing a bowl into warmth, say every two weeks.

Poper-White Narcissi, Soleil d'Or Norcissi. These, if planted from early in September to the middle or end of October, will bloom from about the middle of December to the middle of January. Grow much stronger in our fiber than they do in pebbles. The flowers also last much longer.

Poetaz Lourens Koster, Poetoz Frons Hols. Charming specimens for house decoration grown in bulb fiber in bowls. They are deliciously perfumed and specially recommended. Should be grown in the same manner as Roman Hyacinths.

King Alfred. The merit of this variety is that it blooms early, and by plonting in the beginning of October it may be had in bloom from about January onwards. It has a very bright yellow flower, which is thrown well above the obundant foliage.

**Emperor** always makes a handsome display, but as the bulbs are large it is desirable to have a large and deep bowl to put them in.

Aerolite and Spring Glory are favorite varieties. They always do well.
